4413. Falls of the Yellowstone,
Yellowstone National Park

FALLS OF THE YELLOWSTONE

From Point Lookout is afforded probably the best view of the Great Falls of the Yellowstone, as well as the canyon of the river itself. The falls drop a distance of 360 feet into the gorge below, and are one of the most wonderful and inspiring sights in this region of wonders.

4261. Brown Bear eating garbage, Yellowstone Park.

A YELLOWSTONE PARK BEAR

The bears of the Park are objects of peculiar interest. No sound of gun or bark of dog is ever heard, and the bears, though wild, have become so tame that they give only curious notice to tourists as they pass. They come down in the evening from their homes in the hills to feed around the hotels.

4280. Roaring Mountain, Yellowstone National Park

ROARING MOUNTAIN

Roaring Mountain, is one of the wonders of this park, located on the road between Mammoth Hot Springs and Norris Geyser Basin, is a high hill from which there is a continual eruption of steam, which produces the roaring sound that gives it its name. A violent eruption in 1902 created numerous fissures from which steam issued in such quantities as to kill all the trees on the hillside.

4505. Grasshopper Glacier,
Yellowstone National Park

GRASSHOPPER GLACIER

It is located on the slope of Granite Peak, about 12 miles north of the northeast corner of Yellowstone Park. It gets its name from the layer upon layer of prehistoric grasshoppers so well preserved that they look as though they had alighted only yesterday. The ice field covers an area of seven hundred acres and since its discovery about 50 years ago it has shown practically no change.

4263. Grand Geyser, Yellowstone National Park

GRAND GEYSER

Nature has lavished her gifts on the region of the Yellowstone—all under the guard of mountain sentinels, around whose lofty heads group every form of cloud castle that vagrant winds can build. But of all the wonders that God in His mysterious way has there worked to perform, none is so strange, so startling as the geysers. Grand Geyser, one of the famous active geysers in Upper Geyser Basin, plays every eighteen to twenty days, 250 feet, but only twenty minutes to a half hour.

4293. Grand Canyon of the Yellowstone,
Yellowstone National Park

THE GRAND CANYON OF THE
YELLOWSTONE

The Grand Canyon of the Yellowstone begins just south of the Upper Falls and continues northward for more than 25 miles; it is from 1,000 to 1,800 feet deep and varies from a few hundred feet to more than a mile in width. The walls of the canyon are formed of rhyolite, on which the thermal action of hot water and steam has worked many changes. From this cause comes the tremendous variety in coloring.
